

Patent Claims

1. A device for cross-platform and data-specific visualization of 3D data records by means of visualization software for display on a 2D monitor, characterized in that the 3D volume data are stored together with visualization software on a data carrier, and the latter is transmitted to a user for play back on any desired PC.
2. The device as claimed in claim 1, characterized in that the visualization parameters are also stored on the data carrier in an at least partially unchangeable fashion.
3. The device as claimed in claim 2, characterized in that the data carrier is a CD.
